SUMMARY

IT Analyst at Caterpillar Inc. with 2+ years of experience building automation and data systems for global warehouse operations. I currently work on Microsoft Copilot AI agents and Power Automate workflows used across 20+ facilities, and previously owned Snowflake and SnapLogic data pipelines for the Product Support & Logistics Division. I was selected for a month-long on-site deployment at Caterpillar's US headquarters. Looking for roles in AI Engineering, Automation, or Data Engineering where I can build systems that replace manual work.

EXPERIENCE

Caterpillar Inc.

Bengaluru, India

IT Analyst, Applications I

Mar 2025 – Present

- Built 5+ Microsoft Power Automate workflows and Microsoft Copilot AI agents now used by operations teams across 20+ global warehouse facilities, **running 300+ automated task executions per week** and taking routing, triage, and reporting work off the team.
- Picked for a month-long on-site assignment at Caterpillar's US headquarters to help deploy and stabilise AWCS (Automated Warehouse Control Systems), the core platform running HQ warehouse operations. Worked hands-on across C, C++, and Java subsystems.
- Owned support and code-level fixes for the AWCS stack, working through 500+ application issues a year. Focused on fixing the root cause in code (C/C++/Java) instead of patching tickets, which brought down repeat incidents and improved uptime.
- Built Power BI dashboards tracking warehouse KPIs like throughput, exception rates, and SLA attainment. Supply chain leads across multiple regions now use these directly instead of pulling reports by hand.
- Worked with engineering, infrastructure, and business teams across 3 continents to take automation features from requirements through deployment.

Systems Data Support Analyst, PSLD | CARE

Mar 2024 – Mar 2025

- Built Snowflake analytics tables and SnapLogic ETL flows feeding supply chain KPIs across the Product Support & Logistics Division. Output was consumed through Tableau and Power BI reports used by senior leadership.
- Set up data validation and quality checks across production pipelines, **cutting data discrepancy incidents by around 40%** and making downstream reports more reliable.
- Resolved 50+ data incidents per quarter with under 24-hour average SLA, tracing issues across connected enterprise pipelines and coordinating with application, infra, and business teams.
- Wrote the team's technical documentation covering pipeline dependencies, data dictionaries, and runbooks, which cut onboarding time for new joiners.

Amazon

Chennai, India

Quality Assurance Engineer, Intern

Jan 2023 – Jun 2023

- Built an internal QA Bug Reporting tool that scraped open defects from an internal portal and emailed structured weekly reports to the team, **saving around 3 hours of manual work per week**.
- Automated regression test cases for Multi-Tender Buy Now Pay Later (BNPL) payment pipelines in Saudi Arabia and UAE using the Diamond Tool Kit framework, **pushing automation coverage up by around 25%**.
- Wrote and ran 100+ test scenarios on high-value transactional flows. Joined bug triage regularly and helped bring down pre-launch defects through defect-pattern analysis.

PROJECTS

Enterprise RAG Assistant | *Python, LangChain, Azure OpenAI, FAISS, Streamlit, Azure*

2026

- Built a retrieval-augmented (RAG) assistant over a 500+ page SOP corpus. Chunked and embedded the docs into FAISS, used GPT-4o-mini through Azure OpenAI, and put a Streamlit UI on top with answer citations.
- Wrote an evaluation harness with 50 test questions covering groundedness and latency. Tuned chunking and retrieval-k to lift groundedness from 68% to **91%** while keeping p95 latency under 2 seconds.

Modern Data Stack Pipeline (API to Warehouse to BI) | *Python, Airflow, dbt, Snowflake, Power BI*

2026

- Built an ELT pipeline pulling NYC Open Data into Snowflake daily. Python for extract, Airflow for orchestration, and 15+ dbt models with tests, docs, and incremental materialisations.
- Published a Power BI dashboard on top of the warehouse and added CI checks that catch schema drift and data-quality issues before they reach production tables.

- Heart Disease Risk Prediction** | *Python, Scikit-learn, Logistic Regression, ggplot2*

2023
- Built a pipeline to predict 10-year coronary heart disease risk on 4,000+ clinical records, getting **AUC of 0.82** on the holdout set. Used ggplot2 to show key risk drivers for non-technical readers.
- HR Analytics Dashboard** | *Power BI, SQL, DAX, Power Query*

2023
- Built an HR analytics pipeline over 500+ employee records with DAX measures for drill-down and time-intelligence analysis, **cutting manual HR reporting effort by around 60%**.

TECHNICAL SKILLS

AI & Automation: Microsoft Copilot (AI Agent Development), Power Automate, LangChain, RAG, Azure OpenAI, LLM Prompting, Workflow Automation
Languages: Python, SQL, Java, C, C++, JavaScript, R
Data Engineering: Snowflake, SnapLogic, dbt, Airflow, ETL/ELT, Incremental Ingestion, Data Quality Frameworks, Apache Hadoop
Data & ML: Scikit-learn, Pandas, NumPy, Feature Engineering, EDA, Logistic Regression, Random Forest
Visualisation: Power BI (DAX, Power Query), Tableau, Matplotlib, ggplot2
Cloud & Databases: Microsoft Azure (AZ-900), Snowflake, Oracle Database, MySQL, SQL Server
Enterprise Systems: SAP, Mainframes, AWCS (Automated Warehouse Control Systems)
Tooling: Git, FAISS, Streamlit, Django, React, Jupyter, Agile/Scrum

CERTIFICATIONS

Microsoft Azure Fundamentals, AZ-900 | Microsoft
IBM Data Science Professional Certificate | Coursera
Big Data | Coursera
Java Full Stack (WTN Phase 1 & 2) | Wipro Talent Next

EDUCATION

K L University
Bachelor of Technology, Computer Science and Engineering | *CGPA: 9.15/10*

Vijayawada, AP
Jun 2019 – May 2023
